

Data Deletion Instructions

Effective date: May 29, 2026

SyncTax is designed to keep temporary webhook delivery events only as long as needed for operational use. You can request deletion of local and server-side SyncTax data by following the steps below.

Delete Local App Data

- On Windows, remove the local app data folder for your user account: %APPDATA%\SyncTax.
- On macOS or Linux, remove the corresponding per-user folder: ~/SyncTax.
- This removes locally stored configuration such as license key, Meta settings, and app preferences.

Stop the Desktop App and Purge Server Events

SyncTax is designed to purge webhook delivery events for the active client when the app closes. If you want a manual server-side cleanup, send a deletion request by email using the subject line below.

Email a Deletion Request

- Send your request to thedevmarq@gmail.com with the subject: SyncTax Data Deletion Request.
- Include your license key, business name, and WhatsApp phone number ID so we can identify the correct records.

What Will Be Deleted

- Local configuration stored on your device, if you delete it.
- Temporary webhook status events associated with your configured WhatsApp phone number ID.
- Server-side client configuration, where deletion is permitted and operationally possible.
- Other SyncTax records that are not required for legal, security, fraud-prevention, or billing purposes.

What May Be Retained

We may retain limited records required for accounting, legal compliance, fraud prevention, licensing, or security. Some Meta / WhatsApp records are also governed by Meta's own retention rules and can only be deleted through Meta's systems.

Confirmation

We aim to respond to deletion requests within a reasonable time and will confirm when deletion is completed or explain any retention required by law.
